

Water Wells in Tasmania

By Jared Lilly

Overview

Provide recommendations for the board of a non-profit for fund waterwells to the Republic of Tasmanian peoples

Predict whether a water well is functioning

Business and Data Understanding

Data gathered for a competition
by Driven Data

Data collected from Taarifa and
the Republic of Tasmania's
Ministry of Water

Types of Data

Data Contains: 59,400 rows and 40
columns such as:

- Construction year
- Installation
- Water Sources
- etc.

Three Models were employed

Logistic
Regression

Decision tree
and a modified
Decision Tree

The Winner:

Random Forest

Data Modeling Evaluation

Correctly predict if a Water Well is functional or not
functional 79.60% of the time using my model

Random Forest Model is more resistant to **overfitting**

Recommendations

Using this model 3 recommendations going forward

Fund New Wells

Install by DWE
in the the
Tabora, Dadoma,
Mara, Rukwa and
Lindi Regions

Maintenance and Repair

Wells Older
than 2000
are more likely
nonfunctional

Natural Resources

Springs,
Rivers, and
Lakes

Avoid dams

Next Steps

Use Model

To optimize resource allocation to help the Tanzanian people

Focus on long lasting clean water wells

Trees

Algae

Thank You
